

Risks & Complications discussed with patient ACL Reconstruction

- Deep Infection:** <1/500; could very rarely require open washout or even removal of implant as 2-stage procedure.
Mitigated by iv Abs
- Graft rupture:** 1% per year; may require revision reconstruction surgery
- Cyclops lesion:** 1%; scar tissue forming anterior to graft causing discomfort in full extension; may require arthroscopic excision
- Wound issues (Occasional):** delayed healing (please inform us), scar tissue (thickening), hypersensitivity from small nerve injury (localised numbness)
